

I wholeheartedly OPPOSE the "Access BPL" proposal that will cause immeasurable harm in the form of radio frequency interference to users of the HF spectrum. As the guardians of this public trust, you are obligated to give strong weight in your decisions to protecting the existing, licensed users including Amateur Radio, commercial shortwave broadcasting, military and utility communications, and others. There can be NO justification for placing the users of these services in jeopardy when viable alternatives to BPL exist, and especially when the interference potential of BPL has been well proven. As the guardians of the public interest, it is your prime duty to safeguard the spectrum against such a blatant source of RF pollution. On behalf of all users of the HF spectrum, I urge the Commission to protect valuable emergency communications by voting NO on Docket 03-104.
